

# Disposable Semi Automatic Biopsy Instrument GT40 with detachable cannula, built-in Safety and detachable spacer

GT40 represents the latest generation of semi-automatic Try-Cut® type biopsy needles.

## Features

- **Uniquir Safety.** GT40 is the first semi-automatic biopsy needle with built-in safety lock in the market which can lock the cannula to prevent accidental firing. This mechanism provides extra safety to patient during biopsy procedure, and to operator when removing the samples from the needle.
- **Detachable Cannula:** GT40 is with detachable cannula. When used in CT guided procedure the main handle part of the needle won't obstruct in CT dome. The detached cannula and the stylet with pyramidal tip (packed within the same package) can be assembled as a coaxial needle which allows to perform multiple biopsies at the same puncture site.
- **Detachable Spacer.** The detachable spacer can prevent needle from being "over penetrated". The spacer can be easily detached to further reduce the weight of the needle.
- **More Cutting Power.** The enhanced spring force and optimized internal design gives the needle 15%-20% more cutting power vs. other semi-automatic biopsy needles in the market. A powerful cutting force is even more important with the 10mm depth.
- **Two Penetration Depth.** 10mm and 20mm lengths can be selected adapting to the lesion size.

	Diameter Gauge	Depth 10mm	Length 10mm	Length 20mm
GT40 Disposable Semi Automatic Biopsy Instrument	14	B-1001410	B-1001410	-
	16	B-1001610	B-1001610	B-1001620
	18	B-1001810	B-1001810	B-1001820
	20	-	B-1002010	-

Box 15 Units

Needles with different lengths and diameters are available on request

## GT20 with built-in safety and detachable spacer

GT20 is a lightweight , compact, easily single-hand maneuverable semi-automatic biopsy instrument.

## Features

- **Unique Safety.** GT20 is the first semi-automatic biopsy needle with built-in safety lock in the market which can lock the cannula to prevent accidental firing. This mechanism provides extra safety to patient during biopsy procedure, and to operator when removing the samples from the needle.
- **Detachable Spacer.** The detachable spacer can prevent needle from being "over penetrated". The spacer can be easily detached to further reduce the weight of the needle.
- **More Cutting Power.** The enhanced spring force and optimized internal design gives the needle 15%-20% more cutting power vs. other semi-automatic biopsy needles in the market. A powerful cutting force is even more important with the 10mm depth.
- **Two Penetration Depth.** 10mm and 20mm lengths can be selected adapting to the lesion size.

	Diameter Gauge	Length 10mm	Length 20mm	Length 25mm
